

What's in the Box?

This HealthieOne kit for at-home blood sample collection includes the necessary materials to collect and ship blood samples for 2 people:

- 4 Tasso+ Devices**
for easy and painless blood collection

- 4 Alcohol Pads**
to prep the collection area (arm)

- 4 Bandages**
to cover the tiny collection marks

- 4 Heat Packs**
to increase blood flow to the area

- 1 Styrofoam Box** containing

- 2 Cold Packs**
to keep your samples cool during shipping

- 4 Tubes in 2 Sample Bags and Paper Sleeve**
to contain your blood samples

- 1 Mailing Bag with Pre-Paid Shipping**
to ship your 4 samples to us

⚠ *Not included in kit:
timer, mirror and razor*

Tips

- **Warm up and hydrate before blood collection:** warm arms and good hydration significantly improve blood flow and collection success.
- **Tap the device immediately and continuously:** tapping prevents the first and the next drop from sealing the cut. If you wait, blood can clot and stop flowing.
- **Tap the device body, not the tube,** while periodically checking that the tube stays firmly attached.
- **A small cut is normal:** if the device makes a cut on your skin, it is working exactly as designed.
- **No blood collected ≠ defective device:** sometimes blood flow is insufficient due to individual factors (hydration, circulation, warmth), not a faulty device.
- **In some individuals, blood coagulate quickly even with perfect technique.** This is biology, nobody's fault.
- **If collection fails:** we will send you a free phlebotomy kit so a professional can draw your blood. Please keep all shipping materials and the unused device. Scan this code if you had trouble with blood collection.

Before test day: Important prep steps

At least 4 days in advance, follow the preparation steps at healthieone.com/prepare.

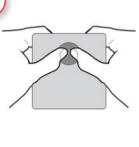

The night before your blood sample collection, perform the following steps.

Both individuals taking the test need to collect their blood on the same day.

 Place both provided cold packs in a freezer for a minimum of 12 hours prior to collecting blood. Keep the two clear elastic bands.	 SCAN QR CODE Each person needs to register their kit in their individual account at HealthieOne.com anytime before blood collection.	 Collect your blood Monday through Wednesday only and ensure that the day of and the day after collection are not holidays.
 Fast for at least 10 hours overnight prior to collecting blood. No food or beverage but do drink water	 Get additional items needed, not included in the kit: timer, mirror and razor.	 Read this entire instruction manual before starting blood collection.

On test day: Collect your blood in the morning

Any day from Monday to Wednesday, if your ice packs are frozen, you have registered your kit, and you have fasted for at least 10 hours: You are ready to collect your blood.

 In the morning, after fasting for 10 hours (no food or beverage, but do drink water), get started by washing your hands.	 Device will be placed on upper arm. If needed, remove excess hair on arm. (razor not included)
 Bend metal disc back and forth in the heat pack to activate it.	 Press heat pack on upper arm for 4 minutes to warm and increase blood flow.
 Clean upper arm with alcohol pad and allow to dry.	 Remove backing to expose the adhesive side of the band-aid, and place it within reach, adhesive side up.

On test day, continued...

Continue blood collection.

 Peel back cover of the blood collection device and stick the device to the alcohol-cleaned, heated area of your arm.	 Remove the clear cover on the device to expose the red button.
 FIRMLY press red button all the way down ONCE and release. An audible click will be heard. Immediately tap device (not tube) with a pen continuously to stimulate blood flow.	 Start a 5-minute timer and continue tapping the device with a pen. Do not tap the tube. Check periodically that the tube is staying firmly attached.
 Remove device at 5 minutes or sooner if blood reaches the top line on the tube. Do not overfill. Use mirror to see.	 Place band-aid on blood collection site.
 REPEAT STEPS 2 to 10 Repeat steps 2 to 10 using the 2nd heat pack, 2nd device and the 2nd tube (gold cap) on your other upper arm.	 Make sure you have collected enough blood: 600 mark line on gold tube 500 mark line on taller pink tube.

Ship your blood samples to our laboratory

It is important to ship your blood tubes on the same day as collection, Monday through Wednesday only.

 - Record collection time, date, your name, date of birth and contact info on return sample bag label. - Place your 2 tubes in your sample bag and press to seal. Leave absorbent pad inside the bag.	 - Place both sample bags each containing 2 tubes alongside the frozen cold packs inside the Styrofoam box, close box with its lid and secure lid with clear elastic bands. - Insert the closed Styrofoam box into the prepaid envelope.
 Hand your package to a FedEx clerk at a FedEx Office or FedEx Ship Center only (not a FedEx OnSite or other FedEx drop off point) before their cutoff time.  fedex.com Last pickup varies by location, so check the time.
